SUMMARY

Software engineer with experience in full-stack development, data automation, and AI-powered applications. Skilled in JavaScript, Python, SQL, REST APIs, and the MERN stack. Built automation pipelines that turned manual, error-prone processes into reliable systems, driving real gains in business efficiency. Brings strong problem-solving instincts and a builder's mindset to engineering roles.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL

Web & Backend: HTML5, CSS3, React.js, Tailwind CSS, Node.js, Express.js

Database & Tools: DBMS, Git, GitHub

Systems & Infrastructure: Linux, AWS, JWT

EXPERIENCE

Associate Software Engineer 01/2026 - 07/2026

Carture India Pvt Ltd | Bangalore, India

- Managed and validated data flowing through the company's POS platform, collaborating cross-functionally with technical support and development teams to translate business requirements into data-driven solutions.
- Automated the indent processing workflow using python, converting a manual process into a repeatable pipeline, contributing to a reported 80% increase in company sales.
- Built and maintained a ticketing system (React, Node.js, Express.js) with structured data models and validation logic to ensure data integrity across the application.
- Used Python and AI-assisted tools to automate internal data processing and reporting, reducing manual entry errors and improving team productivity.

Full Stack Web Developer Intern 09/2024 - 02/2025

Rooman Technologies

- Structured application data using MongoDB/Mongoose and designed RESTful APIs to manage data exchange for chat history, user authentication, and notifications.
- Implemented JWT-based authentication and access controls to secure user data and restrict access to authorized users.
- Built a real-time chat application on the MERN stack, integrating Socket.io for reliable bidirectional communication, with a fully responsive UI across devices.

PROJECTS

Smart AI Resume Analyzer

- Built an AI-powered application to extract, parse, and validate resume data against job descriptions using NLP and text-mining techniques (spaCy, PDFMiner, docx2txt).
- Implemented keyword extraction and cosine similarity scoring, with a Streamlit interface supporting PDF/DOCX uploads and real-time validation feedback.
- Surfaced skill-gap insights by comparing extracted resume data against job description requirements, helping users identify improvement areas.

Skill Barter System

- Built and deployed on Render a full-stack platform where users exchange skills without money, listing skills they offer and skills they want, with matching logic that pairs users with complementary needs.
- Designed MongoDB/Mongoose schemas and RESTful APIs for user profiles, skill listings, and barter requests (pending, accepted, completed), with validation to block duplicate or invalid requests.

EDUCATION

B.E. in Information Science 06/2021 - 06/2025

BCE, Shravanbelagola, Hassan | CGPA: 8.86/10
